7	Source Code	12
8	Conclusion	72

1. Introduction:

"C" language is a programming language which is also known as "Structured Programming". It was initially developed by Dennis Ritchie in the year 1972 and till now it is one of the most used programming languages. Even many later languages have borrowed syntax or features from C language directly or indirectly. However, there are many important basic things to learn in C language which are given below —

- > Syntax,
- ➤ Header file,
- > Function,
 - o Built in function,
 - o User defined function.
- > Keyword,
- ➤ Data type,
 - o Built in data type,
 - o User defined data type.
- ➤ Variable,
- > Return type,
- > Condition,
- ➤ Loop,
 - o For,
 - o While,
 - o Do while.
- > String,
- > Array,
 - o 1D array,
 - o 2D or multi-dimensional array.
- ➤ Pointer.

- > Recursion,
- > Structure,
- > Union,
- File etc.

There are many advantages of C language –

- ✓ Building block for many other programming languages,
- ✓ Powerful and efficient language,
- ✓ Portable language,
- ✓ Built-in functions,
- ✓ Quality to extend itself,
- ✓ Structured programming language,
- ✓ Middle-level language,
- ✓ Implementation of algorithms and data structures,
- ✓ Procedural programming language,
- ✓ Dynamic memory allocation,
- ✓ System programming etc.

The most important point is that initially it was developed as system programming language to write an operating system though we can use C language to create any kind of app, software, 2D games etc. My project is on "Online Bus Ticket Booking" by which people can book bus ticket through online. The reason behind this project idea is current system of booking ticket. As we have to go to the ticket counter of our own and sometimes we have to stand for hours and hours to collect or buy ticket so I want to solve the problem initially. Let me explain why current system is responsible for making this project.

2. Current System:

At present we have to book ticket by going to the ticket counter which is very time expensive and often we stand in line for couple of hours to just buy a ticket from the counter. So this is very disgusting and a matter of great shame in this modern or digital world. What if we can buy tickets without going to the counter by using computer? That's why I have proposed a system by which passenger can book ticket by sitting at home very easily.

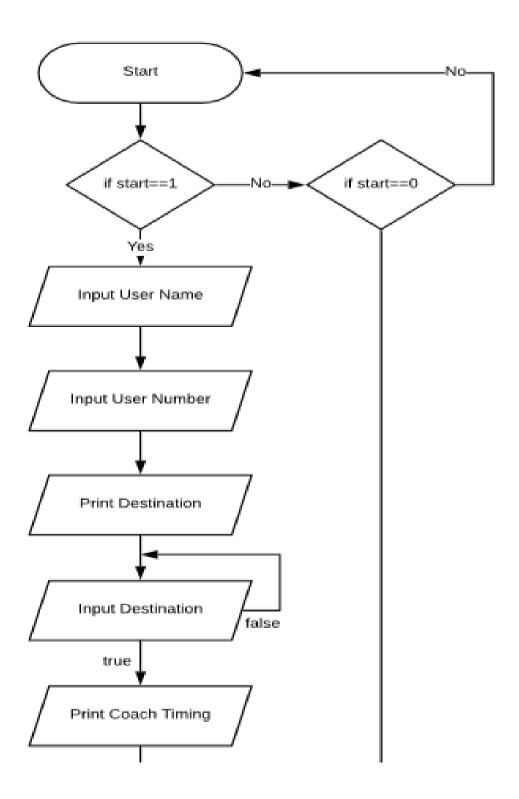

3. Proposed System & Objectives:

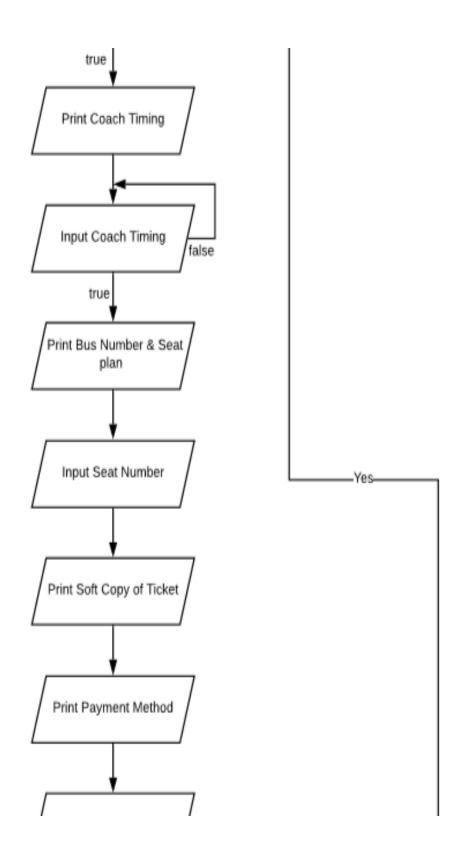

As we all know that "Necessity is the mother of invention", so I have made this project by which anybody can easily book tickets without going to the counter. In this modern world everything becomes smart by computer software so why not booking tickets? People can easily access the software entering his or her surname and phone number. As I have made this project very easily and simply, almost everybody can use this by reading the instructions given. There are some objectives of my project —

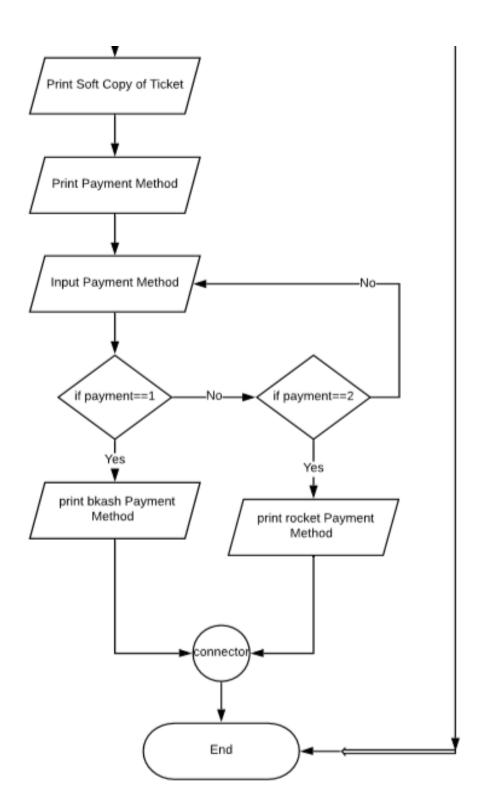

- This is very easy and simple to use,
- It will save our valuable time,
- We don't need to wait for the serial as well,
- Easy payment method,
- The smartest way to book tickets till now.

4. Flowchart of the Project:

I have built this project step by step so that user can easily cope up with the newly introduced system and can easily complete the task of booking tickets. So before going to the main project, I would like to show you the flowchart of my project –

5. Program Specification:

5.1) Input Specification:

Variables	Specifications	Data	Data
		Types	Sizes
start	to start or exit the program	integer	4 bytes
user_name	to scan username from user	string	30 bytes
phone_number	to scan phone no. from user	string	30 bytes
destination	to scan destination from user	integer	4 bytes
seat_row	to set row number of seat	integer	4 bytes
seat_column	to set column number of seat	integer	4 bytes
row	to set row of coach timing	integer	4 bytes
column	to set column of coach timing	integer	4 bytes
seat_number	To scan seat number from user	string	10 bytes
coach_for_Khulna	to scan coach for Khulna from user	integer	4 bytes
coach_for_Rajshahi	to scan coach for Rajshahi from user	integer	4 bytes
coach_for_Comilla	to scan coach for Comilla from user	integer	4 bytes
coach_for_Chittagong	to scan coach for Chittagong from user	integer	4 bytes
payment	to scan payment method from user	integer	4 bytes

5.2) Function Specification:

Function Name	Specifications	Function
		Type
Main()	to compile the program	Integer
introduction()	to print destinations	Void
seatplan()	to print seat plan	Void
Coach()	to print coach timing	Void
Press()	to print pressing key	Void
details_of_booking_ticket_khulna()	to scan and print all	Void
	info. & bus no. for	
	Dhaka to Khulna route	
details_of_booking_ticket_khulna_back()	to scan and print all	Void
	info. & bus no. for	
	Khulna to Dhaka route	

Function Name	Specifications	Function
		Type
details_of_booking_ticket_Rajshahi()	to scan and print all	Void
	info. & bus no. for	
	Dhaka to Rajshahi	
	route	
details_of_booking_ticket_Rajshahi_back()	to scan and print all	Void
	info. & bus no. for	
	Rajshahi to Dhaka	
	route	
details_of_booking_ticket_Comilla()	to scan and print all	Void
	info. & bus no. for	
	Dhaka to Comilla	
	route	
details_of_booking_ticket_Comilla_back()	to scan and print all	Void
	info. & bus no. for	
	Comilla to Dhaka	
	route	
details_of_booking_ticket_Chittagong()	to scan and print all	Void
	info. & bus no. for	
	Dhaka to Chittagong	
	route	
details_of_booking_ticket_Chittagong_back()	to scan and print all	Void
	info. & bus no. for	
	Chittagong to Dhaka	
	route	

6. Processing:

Let me explain how my project will work step by step –

- 1. User has to enter 1 to run the software or 0 to exit. If user enters any other key without entering 1 or 0, software will give user an error message and instruct him or her to enter the mentioned key again.
- **2.** After running the software by entering 1, software will ask user to Page 10

enter username & phone number.

- **3.** After entering username & phone number, software will print our available route & ask user about his or her destination
 - **a.** Dhaka to Khulna = enter 1
 - **b.** Dhaka to Rajshahi = enter 2
 - **c.** Dhaka to Comilla = enter 3
 - **d.** Dhaka to Chittagong = enter 4
 - e. Khulna to Dhaka = enter 5
 - **f.** Rajshahi to Dhaka = enter 6
 - **g.** Comilla to Dhaka = enter 7
 - **h.** Chittagong to Dhaka = enter 8

If user select any other key without mentioned, software will print an error message & again ask to select the right route from user.

- **4.** After selecting route, software will print bus number & seat plan for choosing the seat by user.
- **5.** After choosing seat number, software will print a soft copy of ticket including all user information, bus number, seat number, coach timing & supervisor information.
- **6.** Then software will print payment method and ask user to select one method to pay the ticket cost within 2 hours of order
 - **a.** payment with bkash = enter 1
 - **b.** payment with rocket = enter 2

If user select any other key without mentioned, software will print an error message & again ask to select the right payment key from user.

7. After selecting one payment method, software will print the payment number to pay and some more instructions on how to get

the booked ticket from the counter before departure of user's selected bus.

7. Source Code:

```

```

8. Conclusion:

I have tried my best to make a well-developed project so that this can update the current old system of bus ticket booking. I have felt some lack of features in my own project as user and I hope that I need to update myself more to fulfill the lacking. So that's all about my project.

THE END
